CHAPTER 1

astrocyte

1.1 astrocyte package

1.1.1 Submodules

1.1.2 astrocyte.api module

```
astrocyte.api.check_token()  
astrocyte.api.get_valid_token()  
astrocyte.api.init_storage()  
astrocyte.api.read_storage()  
astrocyte.api.upload_meta(pkg)  
astrocyte.api.write_storage(data)
```

1.1.3 astrocyte.exceptions module

```
exception astrocyte.exceptions.AstroError  
    Bases: Exception  
exception astrocyte.exceptions.BuildError  
    Bases: astrocyte.exceptions.AstroError  
exception astrocyte.exceptions.GliaApiError  
    Bases: astrocyte.exceptions.UploadError  
exception astrocyte.exceptions.InvalidDistributionError  
    Bases: astrocyte.exceptions.UploadError  
exception astrocyte.exceptions.InvalidMetaError  
    Bases: astrocyte.exceptions.UploadError
```

```
exception astrocyte.exceptions.StructureError
    Bases: astrocyte.exceptions.AstroError

exception astrocyte.exceptions.UploadError
    Bases: astrocyte.exceptions.AstroError
```

1.1.4 astrocyte.templates module

```
astrocyte.templates.create_template(name, target, locals={})
astrocyte.templates.get_constants()
astrocyte.templates.parse_template(name, locals={})
```

1.1.5 Module contents

```
class astrocyte.Mod(pkg, namespaced_name)
    Bases: object

    get_full_name()
    get_mod_file()
        Return the full filename of the mod file.

    get_writename()
    is_point_process()
    sanitize_mod_file()

    set_names(name=None, variant=None)
        Change this Mod's names. Updates the mod file and __init__.py

class astrocyte.Package(path, pkg_data)
    Bases: object

    add_mod_file(file, name=None, variant='0')
    build()
    built()
    commit(message)
    edit_asset(mod_part, name=None, variant=None)
    get_distribution()
    get_mod_path(*args)
    get_source_path(*args)
    import_mod_file(origin, destination, name)
    increment_version()
    install()
    link()
    set_path(path)
    uninstall()
    upload()
```

```
class astrocyte.Writer(obj)
Bases: object

    content(indent=0)

    exclude = ['pkg', 'writer']

    find_line(line, return_indent=False)

    find_tagline(find_end=False)

    footer(indent=0)

    get_endline()

    get_init_path()

    get_tagline()

    header(indent=0)

    in_it()

    insert()

    line(msg, indent=0)

    property_line(k, v, indent)

    read_block()

    replace(old, new)

    repr_types = [<class 'int'>, <class 'bool'>, <class 'str'>]

    update()

    write()

astrocyte.execute_command(cmnd)

astrocyte.execute_python(script)

astrocyte.find_files(path_pattern)

astrocyte.get_asset_name(namespace, name, variant='0')

astrocyte.get_glia_version()

astrocyte.get_minimum_glia_version()

astrocyte.get_package(path=None)

astrocyte.get_path_mod_name(path)

astrocyte.load_local_pkg()

astrocyte.parse_asset_name(name)
```

CHAPTER 2

Installation

```
pip install astrocyte
```

CHAPTER 3

Usage

```
astro create package my-package
```

Fill in the prompts and navigate to your package folder.

```
astro add mod /path/to/mod/file
```

After adding any amount of mod files to your package you can build it and upload or install it:

```
astro build  
astro install  
astro upload
```

To upload your packages you will need to register and authenticate with an account on [GliaPI](#).

For use on your local computer either use:

```
astro add mod --local /path/to/mod/file
```

This installs it to a local package that is immediately available.

CHAPTER 4

Indices and tables

- genindex
- modindex
- search

Python Module Index

a

astrocyte, 4
astrocyte.api, 3
astrocyte.exceptions, 3
astrocyte.templates, 4

Index
